This leaflet has been written for parents and carers about how to use this medicine in children. Our information sometimes differs from that provided by the manufacturers, because their information is usually aimed at adult patients. Please read this leaflet carefully. Keep it somewhere safe so that you can read it again.

**Name of drug**
Sevelamer (also called sevelamer hydrochloride and sevelamer carbonate)  
**Brand name:** Renagel®, Renvela®

**Why is it important for my child to take this medicine?**
Children with kidney disease who need to have dialysis cannot control the level of phosphate in their blood after a meal. When the level of phosphate is too high (hyperphosphataemia), this can lead to high blood pressure, itchy skin, red eyes, and bone pain and increase the risk of fractures.

Sevelamer works by binding to phosphate in food so it cannot get from the stomach into the blood.

**What is sevelamer available as?**
- Tablets: 800 mg
- **Powder:** 2.4 g sachets, citrus flavoured

**When should I give sevelamer?**
Sevelamer is given **three times a day** with meals. Give the medicine at about the same times each day with their meals, so that this becomes part of your child’s daily routine, which will help you to remember.

**How much should I give?**
Your doctor will work out the amount of sevelamer (the dose) that is right for your child. The dose will be shown on the medicine label.

Your doctor may suggest that your child has a low dose to start with. They may then increase the dose as your child gets used to the medicine and depending on how your child responds to it.

⚠️ **It is important that you follow your doctor’s instructions about how much to give.**

**How should I give it?**
- **Tablets** should be swallowed with a glass of water. Your child should not chew the tablet.
- **Powder:** Mix the contents of the sachet in 60 mL water. Your doctor or pharmacist will have told you how much to give to your child. Give the right amount of mixture to your child straight away using an oral syringe or medicine spoon. You can get these from your pharmacist. Do not use a kitchen teaspoon as it will not give the right amount.

Throw away any unused liquid. Do not keep it for later.

**When should the medicine start working?**
The medicine will start working straight away but you will not see any difference in your child.

**What if my child is sick (vomits)?**
- If your child is sick less than 30 minutes after having a dose of sevelamer, give them the same dose again.
- If your child is sick more than 30 minutes after having a dose of sevelamer, **you do not need to give them another dose. Wait until the next normal dose.**

If your child is sick again, seek advice from your GP, pharmacist or hospital. They will decide what to do based on your child’s condition and the specific medicine involved.

**What if I forget to give it?**
Do not give the missed dose. Just give the next dose as usual, with the next meal.

**What if I give too much?**
You are unlikely to do harm if you give an extra dose of sevelamer by mistake. If you concerned that you may have given too much, contact your doctor or local NHS services (111 in parts of England; 0845 4647 in parts of England and Wales; 08454 24 24 24 in Scotland). Have the medicine or packaging with you if you telephone for advice.

**Are there any possible side-effects?**
We use medicines to make our children better, but sometimes they have other effects that we don’t want (side-effects).

- **Your child may get stomach ache and may feel sick (nausea) or be sick (vomit). They may also get indigestion, flatulence (wind) or diarrhoea (runny poo).**
- **They may start to itch or develop a skin rash. Using a moisturising cream may help.**

These effects should wear off as your child gets used to the medicine. If you are worried or they are still a problem after two weeks contact your doctor.

There may, sometimes, be other side-effects that are not listed above. If you notice anything unusual and are concerned, contact your doctor. You can report any suspected side-effects to a UK safety scheme at [http://yellowcard.mhra.gov.uk](http://yellowcard.mhra.gov.uk).
Can other medicines be given at the same time as sevelamer?

- You can give your child medicines that contain paracetamol or ibuprofen, unless your doctor has told you not to.
- Sevelamer should not be taken with some medicines that you get on prescription. Tell your doctor and pharmacist about any other medicines your child is taking before giving sevelamer.
- Do not give your child calcium or any other mineral supplements, unless your doctor has told you to.
- Check with your doctor or pharmacist before giving any other medicines to your child. This includes herbal or complementary medicines.

Is there anything else I need to know about this medicine?

- Do not give your child any other medicines for 1 hour before or 3 hours after you give them sevelamer. Sevelamer can bind to other medicines so they work less well.
- It is important that your child takes the sevelamer with their main meals, not just a snack.
- Your doctor will test your child's blood regularly to check the level of phosphate and make sure the dose of sevelamer is correct.

Keep all your clinic appointments, as your doctor needs to check how your child is doing.

- Your child may need to follow a diet that is low in phosphates. Your doctor or dietician can advise what your child should eat and drink, and help you plan meals so your child gets the right amount in their diet.

General advice about medicines

- If you are not sure a medicine is working, contact your doctor but continue to give the medicine as usual in the meantime. Do not give extra doses, as you may do harm.
- Only give this medicine to your child. Never give it to anyone else, even if their condition appears to be the same, as this could do harm.
- If you think someone else may have taken the medicine by accident, contact your doctor straight away.

- Make sure that you always have enough medicine. Order a new prescription at least 2 weeks before you will run out.
- Make sure that the medicine you have at home has not reached the ‘best before’ or ‘use by’ date on the packaging. Give old medicines to your pharmacist to dispose of.

Where should I keep this medicine?

- Keep the medicine in a cupboard, away from heat and direct sunlight. It does not need to be kept in the fridge. For tablets, keep the bottle tightly closed in order to protect the tablets from moisture.
- Make sure that children cannot see or reach the medicine.
- Keep the medicine in the container it came in.

Who to contact for more information

Your doctor, pharmacist or nurse will be able to give you more information about sevelamer and about other medicines used to treat hyperphosphataemia during dialysis. You can also get useful information from:
