This leaflet has been written for parents and carers about how to use this medicine in children. Our information sometimes differs from that provided by the manufacturers, because their information is usually aimed at adult patients. Please read this leaflet carefully. Keep it somewhere safe so that you can read it again.

Gabapentin

This leaflet is about the use of gabapentin for neuropathic pain (pain caused by nerve damage).

Name of drug
Gabapentin
Brand name: Neurontin®

Why is it important for my child to take this medicine?
Gabapentin will help your child to feel less pain.

What is gabapentin available as?
- Tablets: 600 mg, 800 mg
- Capsules: 100 mg, 300 mg, 400 mg; these contain small amounts of lactose
- Liquid medicine: 50 mg in 1 mL; these may contain acesulfame K and saccharin sodium (artificial sweeteners), and propylene glycol. If you have any concerns or questions, speak with your child’s doctor or pharmacist.

When should I give gabapentin?
- Gabapentin is usually given three times a day. This should be first thing in the morning, early afternoon and at bedtime. Ideally, these times are at least 4 hours apart.
- You may start by giving gabapentin once a day for a few days, then twice a day for a few days, then three times a day. This will help your child to get used to the medicine. Your doctor will explain what to do.

How much should I give?
- Your doctor will work out the amount of gabapentin (the dose) that is right for your child. The dose will be shown on the medicine label.
- When you first start giving gabapentin to your child, you will give them a small amount and then increase the dose bit by bit over a few days or weeks. This helps your child to get used to the medicine. Your doctor will explain what to do.

What if my child is sick (vomits)?
- If your child is sick less than 30 minutes after having a dose of gabapentin, give them the same dose again.
- If your child is sick more than 30 minutes after having a dose of gabapentin, you do not need to give them another dose. Wait until the next normal dose.

What if I forget?
- If you usually give it once a day in the morning: Give the missed dose when you remember during the day, as long as this is at least 12 hours before the next dose is due.
- If you usually give it once a day in the evening: If you remember before bedtime, give the missed dose. You do not need to wake up a sleeping child to give a missed dose. You can give the missed dose in the morning, as long as this is at least 12 hours before the evening dose is due.
- If you usually give it twice a day: If you remember up to 4 hours after you should have given a dose, give your child the missed dose. For example, if you usually give a dose at about 7 am, you can give the missed dose at any time up to 11 am. If you remember after that time, do not give the missed dose. Just give the next dose as usual.
- If you usually give it three times a day: Do not give the missed dose. Just give the next dose as usual.

Never give a double dose of gabapentin.

Do not stop giving gabapentin suddenly.
What if I give too much?
If you think you may have given your child too much gabapentin, contact your doctor or local NHS services (111 in England and Scotland; 0845 4647 in parts of Wales), or take your child to hospital.
Take the medicine container or packaging with you, even if it is empty. This will be useful to the doctor. Have the medicine or packaging with you if you telephone for advice.

Are there any possible side-effects?
We use medicines to make our children better, but sometimes they have other effects that we don’t want (side-effects). Your child may get these side-effects when they first start taking gabapentin. They will usually settle down within a week or so as their body gets used to the medicine. Continue to give gabapentin to your child as your doctor has told you to during this time. If any of these side-effects continue for longer than a week or so, or if you are worried, contact your doctor.

• Your child may be drowsy (sleepy), dizzy or unsteady.
• Your child may feel less hungry (lose their appetite), and feel sick (nausea) or be sick (vomit).
• Your child may get diarrhoea, constipation, wind, indigestion or a dry mouth. Your doctor may be able to prescribe other medicines to help with these symptoms if they are a problem.
• Occasionally children may seem particularly emotional, anxious or overactive or may have problems with their sleep.
• Your child may be hungrier than usual – this effect can last for many months. Encourage your child to eat food that is low in fat and sugar, otherwise they may put on a lot of weight.

There may, sometimes, be other side-effects that are not listed above. If you notice anything unusual and are concerned, contact your doctor. You can report any suspected side-effects to a UK safety scheme at http://www.mhra.gov.uk/yellowcard.

Can other common medicines be given at the same time as gabapentin?
• You can give your child medicines that contain ibuprofen or paracetamol, unless your doctor has told you not to.
• If your child needs to take any medicines for indigestion (antacids), do not give these with gabapentin. Give the two medicines at different times of the day.
• Check with your doctor or pharmacist before giving any other medicines to your child. This includes herbal or complementary medicines.

Is there anything else I need to know about this medicine?
• Do not suddenly stop giving gabapentin to your child, as they may get withdrawal symptoms.
• If your doctor decides to stop this medicine, they will discuss this with you. You will usually reduce the dose bit by bit.
• Do not change the dose without talking to your doctor first.

General advice about medicines
• If gabapentin does not seem to be helping your child’s pain, contact your doctor for advice.
• Only give this medicine to your child. Never give it to anyone else, even if they seem to have the same condition, as you could do them harm.

If you think someone else may have taken gabapentin by accident, contact your doctor for advice straight away.
• Try to give the medicine at about the same times each day, to help you remember. Write down the times that you give doses.
• Make sure that you always have enough medicine. Order a new prescription at least 2 weeks before you will run out.
• Make sure that the medicine is not older than the ‘use by’ date on the packaging. Give old medicines to your pharmacist to dispose of.

Where should I keep this medicine?
• Keep the medicine in a cupboard, away from heat and direct sunlight. It does not need to be kept in the fridge.
• Make sure that children cannot see or reach the medicine.
• Keep the medicine in the container it came in.

Who to contact for more information
Your child’s doctor or pharmacist will be able to give you more information about gabapentin and other medicines used to treat neuropathic pain.
